

Cable set up

Setting up cables correctly

Written By: Nikolai

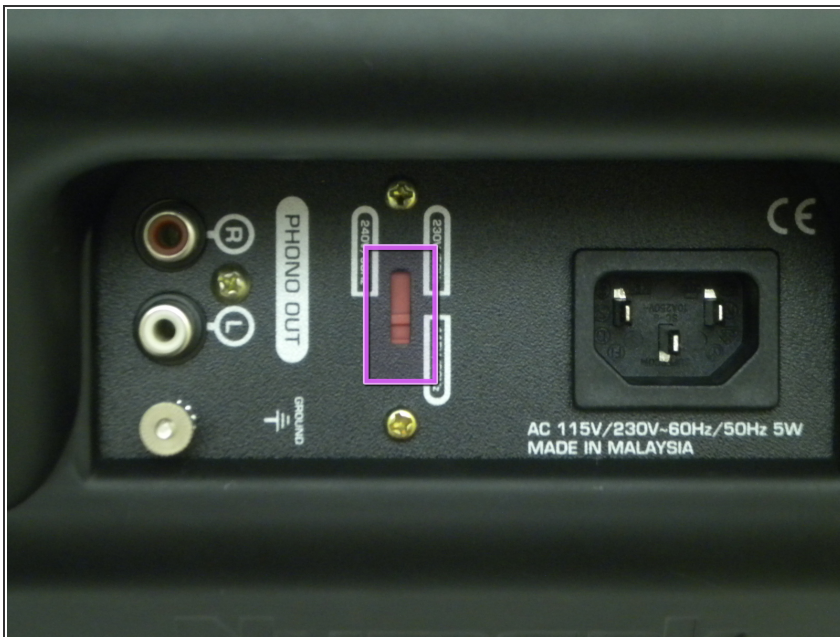

Step 1 — Cable set up

- Check that the red RCA plug is connected to the red RCA jack labeled "R" (this indicates the Right speaker).
- Check that the white RCA plug is connected to the white RCA jack labeled "L" (this indicates the Left speaker).
- To connect the ground clip, loosen the ground screw and insert the clip. Once clip is secure tighten the screw.

Step 2

- Check the voltage selector switch to make sure its set to the proper voltage depending on your geographic location.
- Voltage selector should be set to 115 V/60 Hz in the U.S., or 230 V/50 Hz in other countries.

Step 3

- Insert power cable into socket.
